Robot Structural Analysis Professional uses the International Association for Bridge Code (IABC) principles for structural load analysis. The software is used to verify the structural safety of buildings and is the most used method in the world to verify the structural safety of concrete. The software was developed by Scott Watkins of Masaryk University, Czech Republic, and David Lankford of Masaryk University, USA. Controversy The software was initially called Robot Structural Analysis and is still called by that name in the USA. However, the software is known in Europe as Robot Structural Analysis Professional. Robot Structural Analysis Professional is the only BIM-integrated structural analysis program and was the first BIM-integrated load analysis program. References Category:Civil engineering

The New World order has a plan to wipe out small-time oil suppliers as soon as their supplies drop to 40 percent of the global demand. They have that in mind since many local suppliers – and even the larger oil companies – do not have the capital to last longer than a few months with a cash deficit. Corporations are not the only big threats to local small oil suppliers. They will be joined by the big water monopolies. The US government is currently pursuing the largest water project in the US history, known as the Central Valley Project. California and other states are backing the project. On Thursday, they received some notice that the federal government intends to sign contracts with the big water monopolies that control the Central Valley Project. The federal government controls the project by owning about 60 percent of its infrastructure. The federal government would keep that ownership stake if the project is expanded. Since the project is going to cost about \$15 billion to build, many people are worried that it would not be financially feasible for the federal government to hold that large of stake. So the federal government has been discussing a different arrangement. It has been talking to the big water monopolies, which in turn are talking to the local water districts that would help them build the project. The big water monopolies are asking for a stake in the project. The federal government will give them that stake, and then it will sell its stake to the local water districts for about \$2 billion. I suspect the federal government will not get that much money for the project. The water monopolies need to buy the federal government' 82157476af
